

Maksym Korniev

Java Software Engineer

Hello, I'm Maksym, Java Developer. During my study I have developed several projects using Spring Framework and Hibernate, have constant experience of communication in team's, because our teammates has changed 2 times week for 3 months. Writing clean and reusable code. Moreover I have experience of solving tasks using algorithms, maths. Team player with a true passion for work. Outgoing, disciplined and responsible.

I wrote my own pet project it's simple social media where I introduce you to my acquired skills and abilities, using Hibernate, Spring Framework, MySQL, MongoDB which you can see here: "[Social Media - 'Keriton'](#)"

Location

Kyiv, Ukraine

Education

2022 - 2026

Bachelor's Degree

State University of

Telecomunications

Computer Science

Expertise

- Java
- Spring Framework
- Git
- OOP
- MVC
- HTML/CSS
- JUnit tests

Language

English - Upper-Intermediate

Ukrainian - Native

Experience

Sep 2022 - June 2023

Courses by Sergey Ishcheriakov | Remote

Java Core

These courses were offered to me by the university to learn Java. It was the first time I met this language, before that I had been studying Python for six months on my own, but as soon as the classes started, I forgot about Python because I was completely absorbed in Java. In these courses, we were taught in-depth things about Java Core:

- Data types, logical expressions and functions, loops;
- Arrays, lists, Strings, MVC template;
- Method types, constructors, static fields and methods, method reloading, inheritance, abstract classes, interfaces, Exceptions, working with files;
- Serialization, hash-tables, generics, Threads, blocks for method synchronization, wait-notify methods, stream Api 8, etc.

Summarizing, I can say that these courses from primitives to Api 8 streams gave me a lot of knowledge about Java Core and not just superficial but deep knowledge, so I think I'm pretty good at it.

April 2023 - June 2023

Softserve Marathon | Remote

Hibernate | Spring Framework | JDBC

After completing the Java Core course, I decided that I didn't need to stop there, and immediately went to the Softserve Marathon to upgrade my skills, plus have more knowledge and more practice, and most importantly, to understand and learn:

- GitHub
- DB (SQL, PostgreSQL)
- Hibernate with Spring
- Spring MVC
- Unit testing. Logging
- Spring. Exception handling
- Spring Security
- Rest API Serialization. JSON. XML

During these courses, we worked a lot in teams and with the GitHub: we had 2 sprints a week in which we had to learn new material and do something with the team, push it to the GitHub, check it, fix it, in other words, we were taught to work with a team.

My certificate about completing SoftServe Marathon: "[Certificate](#)".

About me

I can communicate in a team, be polite, know how to resolve conflicts and how to prevent them, I have been playing sports since I was 10, so I have discipline, and I also try to improve my knowledge of Java, write some tasks every day, and read books for greater understanding.

When I work, I will improve my knowledge as well, because I really like Java and I have a thirst for growth in my career and programming!
